

Project Executable Files

Date	1 July 2026
Team ID	xxxxxxx
Project Name	Rising Waters
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	Yes
5	Environment configuration file (.env.example or similar)	Yes
6	Deployed application URL (if hosted)	Yes
7	APK / Executable binary (if applicable for mobile/desktop apps)	Yes
8	Dockerfile / Containerization config (if applicable)	Yes
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	Yes

Step 2: File / Folder Structure

```
Rising-waters/  
├── backend/

│   │   ├── main/  
│   │   │   ├── dashboard.html  
│   │   │   ├── predict.html  
│   │   │   ├── predictions_list.html  
│   │   │   ├── prediction_detail.html  
│   │   │   ├── prediction_export.html  
│   │   │   ├── models_list.html  
│   │   │   ├── locations.html  
│   │   │   ├── location_weather.html  
│   │   │   └── about.html  
│   │   └── base.html  
│   ├── uploads/  
│   ├── models/  
├── flood_dataset.xlsx  
├── requirements.txt  
├── render.yaml  
└── .env.example
```

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	https://rising-waters.onrender.com
Login Credentials (Demo)	
Platform / Hosting Provider	Render
Repository Link	https://github.com/akshitamanikchandra-dev/Rising-waters
Demo Video Link	

Step 4: Run Instructions

Pre-requisites

- Python 3.10+
- Git
- pip

Steps

1. Clone the GitHub repository.
2. Open the project folder.
3. Install dependencies:
`pip install -r requirements.txt`
4. Configure the .env file.
5. Generate the ML model (if required):
`python backend/generate_demo_model.py`
6. Run the application:
`python backend/run.py`
7. Open:
`http://localhost:5000`

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Prediction accuracy depends on the quality of the dataset	Improve by training with larger and more diverse datasets
2	Live weather API integration is not implemented	Weather values are entered manually
3	SMS flood alerts are not available	Planned for future enhancement
